13 page(s) scanned. "Active findings" drive the conformance verdicts below; dismissed and advisory findings render in their sections but never affect a verdict. Per-page attribution appears under each failing criterion.

Executive summary

- Findings (active, WCAG-mapped): 212
 - P0 (critical / regulatory blocker): 0
 - P1 (serious / procurement blocker): 205
 - P2 (moderate): 7
 - P3 (minor): 0
- Criteria tested: 37
- Criteria passing: 33
- Criteria failing: 4

Findings by criterion

1.1.1 Non-text Content — PASS

Level A

All non-text content that is presented to the user has a text alternative that serves the equivalent purpose.

No findings.

1.2.6 Sign Language (Prerecorded) — *not tested*

Level AAA, bucket: editorial

Sign language interpretation is provided for all prerecorded audio content in synchronized media.

BST stance: BST editorial. Client content team commits to providing sign-language interpretation for healthcare-content videos in scope.

No findings.

1.2.7 Extended Audio Description (Prerecorded) — *not tested*

Level AAA, bucket: editorial

Where pauses in foreground audio are insufficient to allow audio descriptions to convey the sense of the video, extended audio description is provided for all prerecorded video content in synchronized media.

No findings.

1.2.8 Media Alternative (Prerecorded) — *not tested*

Level AAA, bucket: editorial

An alternative for time-based media is provided for all prerecorded synchronized media and for all prerecorded video-only media.

No findings.

1.3.1 Info and Relationships — PASS

Level A

Information, structure, and relationships conveyed through presentation can be programmatically determined or are available in text.

No findings.

1.3.2 Meaningful Sequence — PASS

Level A

When the sequence in which content is presented affects its meaning, a correct reading sequence can be programmatically determined.

No findings.

1.3.5 Identify Input Purpose — PASS

Level AA

The purpose of each input field collecting information about the user can be programmatically determined when the field serves a purpose identified in the Input Purposes for User Interface Components section.

No findings.

1.4.1 Use of Color — PASS

Level A

Color is not used as the only visual means of conveying information, indicating an action, prompting a response, or distinguishing a visual element.

No findings.

1.4.3 Contrast (Minimum) — FAIL

Level AA

The visual presentation of text and images of text has a contrast ratio of at least 4.5:1, except for large text (3:1), incidental, and logotypes.

Affected pages (5): <https://clarityhouse.press/books> (33), <https://clarityhouse.press/library> (1), <https://clarityhouse.press/resources> (11), <https://clarityhouse.press/contact> (4), <https://clarityhouse.press/voices> (9)

Findings (58):

- <https://clarityhouse.press/books>

- [P1] color-contrast on `article:nth-child(1) > .md\:flex-row.flex-col.flex > .md\:p-8.p-6.flex-1 > .gap-3.flex.items-center > .bg-emerald-500.border-emerald-500[aria-label="Book status: Available Now"]`
- [P1] color-contrast on `article:nth-child(1) > .md\:flex-row.flex-col.flex > .md\:p-8.p-6.flex-1 > .order-2.md\:order-1.space-y-4 > .flex-wrap.gap-1\.5.flex > .bg-brand-teal\10.py-1\.5.border-brand-teal\20:nth-child(1)`

- [P1] color-contrast on .border-brand-gold\10 > .text-brand-charcoal\60 > li:nth-child(3) > span

1.4.4 Resize Text — PASS

Level AA

Except for captions and images of text, text can be resized without assistive technology up to 200 percent without loss of content or functionality.

No findings.

1.4.5 Images of Text — PASS

Level AA

If the technologies being used can achieve the visual presentation, text is used to convey information rather than images of text except for customizable or essential cases.

No findings.

1.4.6 Contrast (Enhanced) — *not tested*

Level AAA, bucket: component

The visual presentation of text and images of text has a contrast ratio of at least 7:1, except for large text (4.5:1), incidental, and logotypes.

BST stance: BST component-shippable. HELiX text color tokens target 7:1 against background tokens by default; non-HELiX consumers fail this when extending the token system without recomputing pairs.

No findings.

1.4.8 Visual Presentation — *not tested*

Level AAA, bucket: editorial

For the visual presentation of blocks of text, a mechanism is available to achieve foreground/background color selection, width ≤ 80 chars, justified-text toggle, $1.5\times$ line spacing, and 200% resize without horizontal scroll.

BST stance: BST editorial. Client content team commits to prose styles meeting these constraints; CMS authoring presets can enforce.

No findings.

1.4.9 Images of Text (No Exception) — *not tested*

Level AAA, bucket: editorial

Images of text are only used for pure decoration or where a particular presentation of text is essential to the information being conveyed.

No findings.

1.4.10 Reflow — **FAIL**

Level AA

Content can be presented without loss of information or functionality, and without requiring scrolling in two dimensions, at 320 CSS pixels width or 256 CSS pixels height.

Findings (1):

- [P1] `bst-reflow` on `nav#mobile-menu-panel.relative`

1.4.11 Non-text Contrast — PASS

Level AA

The visual presentation of user interface components and graphical objects has a contrast ratio of at least 3:1 against adjacent color(s), except for incidental or essential cases.

No findings.

1.4.12 Text Spacing — FAIL

Level AA

No loss of content or functionality occurs when users override text spacing properties (line-height $1.5\times$, paragraph spacing $2\times$ font size, letter spacing $0.12\times$ font size, word spacing $0.16\times$ font size).

Affected pages (4): <https://clarityhouse.press/> (1), <https://clarityhouse.press/books> (2), <https://clarityhouse.press/blog> (3), <https://clarityhouse.press/library> (1)

Findings (7):

- <https://clarityhouse.press/>
 - [P2] `bst-text-spacing` on `p.font-sans`
- <https://clarityhouse.press/books>
 - [P2] `bst-text-spacing` on `p.text-sm`
 - [P2] `bst-text-spacing` on `p.text-sm`
- <https://clarityhouse.press/blog>
 - [P2] `bst-text-spacing` on `p.font-sans`
 - [P2] `bst-text-spacing` on `p.font-sans`
 - [P2] `bst-text-spacing` on `p.font-sans`
- <https://clarityhouse.press/library>
 - [P2] `bst-text-spacing` on `p.mt-2`

1.4.13 Content on Hover or Focus — PASS

Level AA

Where receiving and then removing pointer hover or keyboard focus triggers additional content, the content is dismissable, hoverable, and persistent (with exceptions).

No findings.

2.1.1 Keyboard — PASS

Level A

All functionality of the content is operable through a keyboard interface without requiring specific timings for individual keystrokes.

No findings.

2.1.2 No Keyboard Trap — PASS

Level A

If keyboard focus can be moved to a component of the page using a keyboard interface, then focus can be moved away from that component using only a keyboard interface.

No findings.

2.1.3 Keyboard (No Exception) — *not tested*

Level AAA, bucket: component

All functionality of the content is operable through a keyboard interface without requiring specific timings for individual keystrokes.

BST stance: BST component-shippable. HELiX interactive components meet this; failures typically come from custom canvas-based widgets or third-party embeds.

No findings.

2.2.3 No Timing — *not tested*

Level AAA, bucket: application

Timing is not an essential part of the event or activity presented by the content, except for non-interactive synchronized media and real-time events.

BST stance: BST application-level. Architecture decision: portal session timeouts, intake-flow time limits, scheduled-appointment slot windows.

No findings.

2.2.5 Re-authenticating — *not tested*

Level AAA, bucket: application

When an authenticated session expires, the user can continue the activity without loss of data after re-authenticating.

BST stance: BST application-level. Backend session-restoration architecture; common pain point in patient-portal authenticated flows.

No findings.

2.2.6 Timeouts — *not tested*

Level AAA, bucket: application

Users are warned of the duration of any user inactivity that could cause data loss, unless the data is preserved for more than 20 hours when the user does not take any actions.

BST stance: Introduced in WCAG 2.1. BST application-level. Architecture: session timeout warning UX, persisted-draft strategy.

No findings.

2.4.1 Bypass Blocks — PASS

Level A

A mechanism is available to bypass blocks of content that are repeated on multiple Web pages.

No findings.

2.4.2 Page Titled — PASS

Level A

Web pages have titles that describe topic or purpose.

No findings.

2.4.3 Focus Order — PASS

Level A

If a Web page can be navigated sequentially and the navigation sequences affect meaning or operation, focusable components receive focus in an order that preserves meaning and operability.

No findings.

2.4.4 Link Purpose (In Context) — PASS

Level A

The purpose of each link can be determined from the link text alone or from the link text together with its programmatically determined link context.

No findings.

2.4.5 Multiple Ways — PASS

Level AA

More than one way is available to locate a Web page within a set of Web pages except where the Web page is the result of, or a step in, a process.

No findings.

2.4.6 Headings and Labels — PASS

Level AA

Headings and labels describe topic or purpose.

No findings.

2.4.7 Focus Visible — PASS

Level AA

Any keyboard operable user interface has a mode of operation where the keyboard focus indicator is visible.

No findings.

2.4.8 Location — *not tested*

Level AAA, bucket: component

Information about the user's location within a set of Web pages is available.

BST stance: BST component-shippable. HELiX breadcrumb + section-heading components address this; site-architecture choice still matters.

No findings.

2.4.9 Link Purpose (Link Only) — *not tested*

Level AAA, bucket: component

A mechanism is available to allow the purpose of each link to be identified from link text alone, except where the purpose of the link would be ambiguous to users in general.

BST stance: BST component-shippable. The platform flags "click here" / "read more" patterns; HELiX link components encourage purpose-bearing text.

No findings.

2.4.10 Section Headings — *not tested*

Level AAA, bucket: editorial

Section headings are used to organize the content.

BST stance: BST editorial. Long-form content (clinical articles, policy pages) must use section headings; CMS authoring presets enforce.

No findings.

2.4.11 Focus Not Obscured (Minimum) — PASS

Level AA

When a user interface component receives keyboard focus, the component is not entirely hidden due to author-created content.

BST stance: New in WCAG 2.2. Frequently flagged on sticky-footer / sticky-header layouts during scroll.

No findings.

2.4.12 Focus Not Obscured (Enhanced) — *not tested*

Level AAA, bucket: component

When a user interface component receives keyboard focus, no part of the component is hidden by author-created content.

BST stance: New in WCAG 2.2. BST component-shippable. HELiX scroll-padding tokens prevent obscure-on-scroll; consumers must not override.

No findings.

2.4.13 Focus Appearance — *not tested*

Level AAA, bucket: component

When the keyboard focus indicator is visible, an area of the focus indicator meets contrast and area requirements.

BST stance: New in WCAG 2.2. BST component-shippable. HELiX defines a 2px solid outline at 3:1 minimum contrast; consumers using box-shadow-only focus rings fail forced-colors mode.

No findings.

2.5.5 Target Size (Enhanced) — *not tested*

Level AAA, bucket: component

The size of the target for pointer inputs is at least 44×44 CSS pixels, except where the target is in a sentence or block of text, the size is determined by the user agent, or a particular presentation is essential.

BST stance: BST component-shippable. HELiX components ship at 44×44 default; consumer-overridden sm variants frequently fail.

No findings.

2.5.7 Dragging Movements — **PASS**

Level AA

All functionality that uses a dragging movement for operation can be achieved by a single pointer without dragging, unless dragging is essential or determined by user-agent settings.

BST stance: New in WCAG 2.2. Range sliders, kanban boards, and signature panels are common offenders in healthcare admin tooling.

No findings.

2.5.8 Target Size (Minimum) — **FAIL**

Level AA

The size of the target for pointer inputs is at least 24×24 CSS pixels, except for essential, equivalent, inline, user-agent, or undersized exceptions.

BST stance: New in WCAG 2.2. AAA bucket sibling (2.5.5 Target Size Enhanced, 44×44) is the BST component floor — HELiX components ship at 44×44 default.

3.1.1 Language of Page — PASS

Level A

The default human language of each Web page can be programmatically determined.

No findings.

3.1.2 Language of Parts — PASS

Level AA

The human language of each passage or phrase in the content can be programmatically determined except for proper names, technical terms, words of indeterminate language, and words or phrases that have become part of the vernacular of the immediately surrounding text.

No findings.

3.1.3 Unusual Words — *not tested*

Level AAA, bucket: editorial

A mechanism is available for identifying specific definitions of words or phrases used in an unusual or restricted way, including idioms and jargon.

No findings.

3.1.4 Abbreviations — *not tested*

Level AAA, bucket: component

A mechanism for identifying the expanded form or meaning of abbreviations is available.

BST stance: BST component-shippable. HELiX abbreviation component (with title-attribute fallback) addresses this; non-component prose uses the editorial pathway.

No findings.

3.1.5 Reading Level — *not tested*

Level AAA, bucket: editorial

When text requires reading ability more advanced than the lower secondary education level after removal of proper names and titles, supplemental content, or a version that does not require reading ability more advanced than the lower secondary education level, is available.

BST stance: BST editorial. Plain-language summaries required for patient-facing content beyond ~8th-grade reading level. Healthcare clinical content commonly requires plain-language siblings.

No findings.

3.1.6 Pronunciation — *not tested*

Level AAA, bucket: editorial

A mechanism is available for identifying specific pronunciation of words where meaning of the words, in context, is ambiguous without knowing the pronunciation.

No findings.

3.2.3 Consistent Navigation — PASS

Level AA

Navigational mechanisms that are repeated on multiple Web pages within a set of Web pages occur in the same relative order each time they are repeated, unless a change is initiated by the user.

No findings.

3.2.4 Consistent Identification — PASS

Level AA

Components that have the same functionality within a set of Web pages are identified consistently.

No findings.

3.2.5 Change on Request — *not tested*

Level AAA, bucket: component

Changes of context are initiated only by user request or a mechanism is available to turn off such changes.

BST stance: BST component-shippable. HELiX form / nav components do not change context on focus/input; auto-submitting forms fail this.

No findings.

3.2.6 Consistent Help — PASS

Level A

Help mechanisms repeated on multiple Web pages occur in the same relative order, unless a change is initiated by the user.

BST stance: New in WCAG 2.2. Applies when a site offers contact/help mechanisms across pages — the platform flags inconsistent placement across sampled pages.

No findings.

3.3.1 Error Identification — PASS

Level A

If an input error is automatically detected, the item that is in error is identified and the error is described to the user in text.

No findings.

3.3.2 Labels or Instructions — PASS

Level A

Labels or instructions are provided when content requires user input.

No findings.

3.3.3 Error Suggestion — PASS

Level AA

If an input error is automatically detected and suggestions for correction are known, then the suggestions are provided to the user, unless it would jeopardize the security or purpose of the content.

No findings.

3.3.4 Error Prevention (Legal, Financial, Data) — PASS

Level AA

For Web pages that cause legal commitments or financial transactions for the user to occur, that modify or delete user-controllable data in data storage systems, or that submit user test responses, at least one of the following is true: reversible, checked, or confirmed.

No findings.

3.3.5 Help — *not tested*

Level AAA, bucket: component

Context-sensitive help is available.

BST stance: BST component-shippable. HELiX help-text component provides per-input contextual help; consumers must wire field-help slots.

No findings.

3.3.6 Error Prevention (All) — *not tested*

Level AAA, bucket: component

For Web pages that require the user to submit information, at least one of the following is true: reversible, checked, or confirmed.

BST stance: BST component-shippable. HELiX form patterns include confirm-step variants; per-engagement we verify reversibility on destructive actions.

No findings.

3.3.7 Redundant Entry — PASS

Level A

Information previously entered by or provided to the user that is required to be entered again in the same process is either auto-populated or available for the user to select.

BST stance: New in WCAG 2.2. Particularly relevant to patient-intake flows where demographic info often repeats across steps.

No findings.

3.3.8 Accessible Authentication (Minimum) — PASS

Level AA

A cognitive function test (such as remembering a password or solving a puzzle) is not required for any step in an authentication process unless that step provides at least one of: alternative method, mechanism, object recognition, or personal-content identification.

BST stance: New in WCAG 2.2. Patient-portal MFA flows commonly fail this — fold-in for any portal engagement.

No findings.

3.3.9 Accessible Authentication (Enhanced) — *not tested*

Level AAA, bucket: application

A cognitive function test (such as remembering a password or solving a puzzle) is not required for any step in an authentication process.

BST stance: New in WCAG 2.2. BST application-level. Backend auth architecture: passkeys, magic links, OAuth — true escape from cognitive-test floor.

No findings.

4.1.2 Name, Role, Value — PASS

Level A

For all user interface components, the name and role can be programmatically determined; states, properties, and values that can be set by the user can be programmatically set; and notification of changes to these items is available to user agents, including assistive technologies.

No findings.

4.1.3 Status Messages — PASS

Level AA

In content implemented using markup languages, status messages can be programmatically determined through role or properties such that they can be presented to the user by assistive technologies without receiving focus.

No findings.

This ACR was generated by the BST A11y Audit Platform (scorer 0.0.0) and signed by Jake Strawn. Findings are produced deterministically from the pinned WCAG 2.2 success criteria matrix and BST scoring synthesis.
